AAAS – What We Know – The Reality, Risks, and Response to Climate Change (March 2014)
http://whatweknow.aaas.org/wp-content/uploads/2014/03/AAAS-What-We-Know.pdf

I. Climate Reality
   A. Climate scientists agree: Humans are driving climate change
   B. Climate change is happening now. And it's going to get worse
      The core science of global warming
         Sea Ice
         Ice Sheets and Glaciers
         Ocean Acidification
         Ecological Impacts
         Sea Level Rise
         Floods, Heat Waves and Drought
         Wildfires
         Effects on Health and Well-being
         Climate Change and National Security

II. Climate Risks
   A. High-risk scenarios: the high-side of projections
      Global Temperature
      Floods, Heat Waves and Drought
      Sea Level
   B. Abrupt climate change
      Some potential climate change scenarios include:
      Ecosystem Collapse
      Arctic Sea Ice Collapse
      Large-Scale Ice Sheet Collapse
      Destabilizing of Sea Floor Methane
      Permafrost Melt

III. Climate Response
   A. The sooner we act, the lower the risk and cost
   B. There is much we can do
